METIS case study

Flood & Water Management Act Roadmap

To scope the implications for Ealing of the Flood and Water Management Act and review the current Flood and Water Management Practice. Then develop a roadmap to meet the new requirements.

OUR APPROACH.

- Carry out a current state review of the flood and water management practices in Ealing Borough Council.
- Working with officers we establish their knowledge and experience and walk through all the elements of the Act to improve their understanding of the new duties.
- Comparing the requirements of the Act to the results from the current state review we create a roadmap detailing the council's current position and their options for getting where they need to be.
- Finally, we develop an action plan to enable Ealing to comply with the legislation.

PROJECT OUTCOMES.

Through this project, Ealing Council has:

- A better understanding of the requirements of the Flood and Water Management Act.
- A good understanding of the current state of readiness for the responsibilities of the Act.
- A good understanding of the options available to implement and run the requirements of the Flood and Water Management Act.
